SUMMARY

Recent **SFU Computer Science** graduate with hands-on experience deploying **AWS infrastructure** (ECS Fargate, EC2, VPC, RDS) and automating environments with **Terraform** and **GitHub Actions**. Background in **IT operations**, **Linux administration**, and mission-critical **network management** under high-pressure conditions.

EDUCATION

Simon Fraser University | BSc in Computing Science – Software Systems | Dean's List (2 semesters) **May 2022 – Apr 2025**

SKILLS

Cloud & DevOps: AWS (EC2, ECS Fargate, RDS, VPC, ALB, S3, CloudFront, CloudWatch, SNS, IAM), Terraform, Docker, GitHub Actions

Systems & Scripting: Linux (Ubuntu), Bash, Shell Scripting, Windows, MacOS, cron, Git, networking tools

Backend & DB: Python (FastAPI), Node.js (Express), PostgreSQL, MongoDB, DynamoDB, RESTful API, gRPC

Other Languages: TypeScript, JavaScript (Next.js, React), C/C++, Rust

PROJECTS

NetOps Monitor | Bash, Python, PostgreSQL, AWS (EC2/RDS/CloudWatch/SNS), Terraform | [GitHub](#) **Apr 2026 – Present**

- Provisioned a production-grade AWS environment using Terraform, including a custom VPC with public/private subnet separation, EC2 compute, RDS PostgreSQL, Security Groups, and IAM roles, enabling fully reproducible, zero-click deployments
- Developed Bash automation scripts scheduled via cron jobs to continuously collect network metrics (ping latency, packet loss, DNS resolution time, traceroute hops) and pipe results into a FastAPI backend, eliminating manual monitoring overhead
- Engineered a CloudWatch + SNS alerting pipeline that publishes custom metrics from Bash collectors, triggers alarms on threshold breaches (e.g., latency, packet loss) and delivers email notifications, reducing MTTR for network incidents
- Designed RESTful API endpoints with Python FastAPI to ingest monitoring data from Bash collectors, persist time-series metrics to PostgreSQL (RDS), and serve historical analytics to a React/TypeScript dashboard

Currency Insight Tracker 2 | Terraform, AWS, Docker, Python, GitHub Actions | [GitHub](#) **Mar 2026 – May 2026**

- Reduced infrastructure provisioning time by 95% with modular Terraform scripts automating VPC, ALB, and ECS Fargate setup, migrated from a serverless V1 (Lambda/DynamoDB) to a containerized, production-grade architecture
- Decreased deployment latency by 90% by engineering a dual-track CI/CD pipeline via GitHub Actions automating ECR image pushes and CloudFront cache invalidations
- Architected a multi-tier VPC network with ECS tasks in private subnets behind an ALB; integrated CloudWatch Alarms and Log Groups for full-stack observability

The Doum Academy Platform | Next.js, Express.js, MongoDB, TypeScript | [GitHub](#) | [Link](#) **Nov 2025 – Present**

- Full-Stack Deployment: Engineered and managed the end-to-end deployment of a Node.js and Next.js curriculum management application integrated with a MongoDB database layer.

EXPERIENCE

Freelance Full-Stack Developer & STEM Instructor | The Doum Academy **Jan 2022 – Present**

- Architecting a curriculum management platform to digitize academy operations; oversaw full SDLC from requirements gathering to deployment (see Projects for technical details)

Technical Assistant | DAEWON Info & Comm Corp. (South Korea) **May 2020 – Apr 2021**

- Deployed and configured Windows OS images across 30+ university workstations using standardized imaging procedures, reducing setup time by ~60% compared to manual installation
- Administered Active Directory user accounts and group policies for university staff and student environments, ensuring consistent access control across the domain
- Resolved 50+ weekly network and hardware issues for university workstations, maintaining zero unplanned downtime through proactive maintenance and rapid fault isolation

MILITARY EXPERIENCE / LEADERSHIP

Artillery Signal Operator | Republic of Korea Army (Sergeant) **Jun 2018 – Mar 2020**

- Operated and maintained field communication hardware and networking equipment under 24/7 uptime requirements; performed rapid fault isolation and circuit restoration across multi-node communication links during live operational conditions
- Led a 10-member technical team responsible for network infrastructure deployment and troubleshooting
