SUMMARY

Cloud/DevOps Engineer specializing in automating **AWS** environments with **Terraform** and **GitHub Actions**. Experienced in migrating serverless applications to secure, production-grade **ECS Fargate clusters** with a focus on **VPC** isolation and cost-efficiency

EDUCATION

Simon Fraser University | BSc in Computing Science – Software Systems, Dean's List (2 semesters) **May 2022 – Apr 2025**

SKILLS

Cloud & DevOps: AWS (ECS, VPC, ALB, ECR, S3, CloudFront), Terraform, Docker, GitHub Actions

Systems & Languages: C/C++, Rust, Haskell, Linux (Ubuntu), Git, CMake, OpenCV, GoogleTest

Backend: Python (FastAPI), Node.js (Express), Java (Spring Boot), gRPC, RESTful API, MongoDB, SQL

Frontend: TypeScript, JavaScript, Next.js, React, Tailwind CSS, HTML5/CSS3

PROJECTS

Currency Insight Tracker V2 (Full-stack & DevOps) | Terraform, AWS, Docker, FastAPI | [GitHub](#) **April 2026 – May 2026**

- **Accomplished 100% environment parity** between development and production by **containerizing the FastAPI backend with Docker**, resulting in a significant reduction in "it works on my machine" deployment errors
- **Reduced manual infrastructure provisioning time by 95%** by **developing modular Terraform scripts** to automate the setup of high-availability components including a Custom VPC, ALB, and ECS Fargate
- **Decreased deployment latency by 90%** by **engineering a dual-track CI/CD pipeline** via GitHub Actions that automated ECR image pushes and CloudFront cache invalidations
- **Enhanced system security and isolated sensitive workloads** by **architecting a multi-tier network** within a Custom VPC, placing ECS tasks in Private Subnets and routing all traffic through an Application Load Balancer
- **Optimized application load times globally** by **implementing a CloudFront CDN distribution** and reducing Docker image sizes through multi-stage builds

Currency Insight Tracker V1 (Serverless) | AWS Lambda, DynamoDB, React | [GitHub](#) **March 2026 – April 2026**

- **Improved data retrieval speed for historical rates** by **integrating AWS Lambda with DynamoDB**, allowing for high-concurrency requests with sub-second latency
- **Achieved 40% cost savings** compared to traditional EC2 hosting by **architecting a serverless backend** using AWS Lambda and API Gateway, utilizing a pay-per-use billing model
- **Streamlined frontend accessibility** by **deploying a React dashboard through S3 static hosting**, ensuring 99.9% availability of the client interface

Doum Academy Platform | Next.js, Express.js, MongoDB, TypeScript | [GitHub](#) | [Link](#) **Nov 2025 – Present**

- **Full-Stack Deployment:** Orchestrated the end-to-end deployment of a curriculum management system, managing everything from a MongoDB database layer to a Next.js (App Router) frontend
- **API Standardization:** Engineered secure RESTful APIs using Express 5.2 and Mongoose, ensuring consistent data flow and system reliability for external email services (Nodemailer)
- **Maintainability & Type Safety:** Implemented strict TypeScript protocols across the stack to minimize runtime errors and enhance codebase maintainability for long-term operations

EXPERIENCE

STEM Tutor & Coding Instructor | **The Doum Academy** **Jan 2022 – Present**

- **Technical Mentorship:** Mentored students in university-level CS and advanced STEM subjects, maintaining a 95%+ class average by simplifying complex technical and analytical concepts

Technical Assistant | **DAEWON Info & Comm Corp. (South Korea)** **May 2020 – Apr 2021**

- **System Troubleshooting:** Resolved 50+ weekly network and hardware issues for university workstations, ensuring zero downtime for academic operations through proactive maintenance

MILITARY EXPERIENCE / LEADERSHIP

Artillery Signal Operator | **Republic of Korea Army (Sergeant)** **Jun 2018 – Mar 2020**

- **Leadership & Problem Solving:** Commanded a 10-member squad, managing secure communication protocols and awarded **2nd place** in a brigade-level emergency restoration competition
